### Abstract

We provide a list of 4,790 bird skins that have been kept in the Forestry and Forest Products Research Institute (FFPRI). They were collected mainly from 1920s to 1930s by the Wildlife Research Laboratory of the Ministry of Agriculture at that time. The collection includes many specimens of birds that had collided with lighthouses during migration and specimens collected from the Kurile Islands.

**Key words** : 4,790 bird skins, Collided birds with the lighthouse, Kurile Islands

### Introduction

Many wildlife specimens collected by the Ministry of Agriculture have been kept in the Forestry and Forest Products Research Institute (FFPRI). Although collection dates of them range from 1880s to 1990s, more than 80% were collected between 1920s and 1930s by staffs of the Wildlife Research Laboratory at that time. Following the loss of most specimens by the Great Earthquake of 1923, they made much effort for collecting new ones in cooperation with concerning people and institutions (Matsuyama, 1989, 1997). They asked, for example, many lighthouse keepers in Japanese territory at that time to send birds that had collided with the lighthouse during migration. Those bodies provided about 1,000 specimens as well as new information about bird migration in Japan (e.g. Ishizawa, 1960, 1961). They also asked governmental institutes of marine products in the Kurile Islands to observe and collect birds. The specimens from the Kurile amounted more than 900 and some of them have been used in a pioneering paper about avifauna of the Kurile Islands (Yamashina, 1929). The collection, fortunately, was saved from the air raids on Tokyo in the Second World War and has been used in various ornithological papers until today (e.g. Uchida, 1921; Mishima, 1962; Kawaji and Higuchi, 1989; Noma and Yumoto, 1997; Artukhin *et al.*, 2001).

To aid the use of the valuable collection, we have prepared a list of 4,790 bird skins, which constitute the majority of the

specimens and are in greatest demand for scientific surveys. Recently, T. Mishima donated his collection of many wildlife specimens to FFPRI and a list of 5,080 bird skins have already been published (Kawaji *et al.*, 2002). The two lists cover nearly 10,000 bird skins kept in FFPRI.

The list consists of order, family, species, English name, Japanese name, specimen number, sex, age, collection date, locality and collector's name as almost same as Kawaji *et al.* (2002). Because the specimens were described in accordance with the classification system in place when the collections had been conducted, some of the scientific names have changed over the years. In this list, we revised the scientific names of the birds in Japan referring to the Ornithological Society of Japan (2000). For those species that were not included in the Ornithological Society of Japan (2000), the scientific names, English and Japanese names were revised referring to Yamashina (1986) and del Hoyo *et al.* (1992, 1994, 1996, 1997, 1999, 2001, 2002). Although some of the region names have changed, we did not change the locality names on the labels and the list but translated the names into English. The species are arranged based upon the Ornithological Society of Japan (2000), Peters' Check-lists of birds of the world (I-XV, 1934-1986), and Vaurie (1959, 1965). All the specimens are listed in groups of species.

## 森林総合研究所所蔵の仮剥製鳥類標本目録

川路 則友<sup>1)\*</sup>・東條 一史<sup>1)</sup>・松岡 茂<sup>2)</sup>・高野 肇<sup>3)</sup>・北原 英治<sup>1)</sup>

### 要 旨

森林総合研究所に所蔵してある数多くの鳥獣類標本のうち、仮剥製鳥類標本 4,790 点について、リストを作成、公表する。これら標本は、おもに 1920 年代から 1930 年代にかけて、当時の農林省鳥獣調査室によって収集されたものである。標本には、おもに渡り期に全国の灯台から収集された衝死鳥や千島列島からの収集品などが含まれる。

キーワード：仮剥製鳥類標本、4,790 点、灯台衝死鳥、千島列島
